

# UC DAVIS

## SUSTAINABLE TRANSPORTATION ENERGY PATHWAYS

*An Institute of Transportation Studies Program*

## **The fuel economy of MD/HD trucks 2015-2050**

**Andrew Burke  
Hengbing Zhao**

**12/1/2016**

# Scope

## Vehicle types

- **Medium-duty trucks**
- **Heavy-duty trucks and buses**

## Vehicle technologies

- **Engine/transmission**
- **Hybrid-electric**
- **Battery-electric**
- **Fuel cell**

## Fuel energy

- **Diesel/NG**
- **Electricity**
- **Hydrogen**

# Trucks and buses to consider in the simulations

Truck Type	Technologies	Description / Example	Miles/day Operating days/yr	EMFAC 2015 MY mpg	DOE/EPA baseline 2010 mpg
Long Haul	Diesel, hybrid, CNG SI(500), <b>LNG CI(500)</b> , FC(500)	Class 8 sleeper cab	287 miles/day 312 days/yr	6.6	6.6
Short haul	Diesel, hybrid, CNG(250), FC(250), BEV (100-250)	Class 8 non sleeper cab	140 miles/day 312 days/yr	6.5	7.0
MD urban	Diesel, <b>Gas</b> , diesel hybrid, CNG(250), FC(150-250), BEV(100-250)	Delivery truck (UPS)	80 312	8.6	8.8
Transit Bus	Diesel, hybrid, CNG(300), FC(300), BEV(150-300)	Transit Bus	150 327	4.6	6.7
Other Bus	Diesel, hybrid, CNG(300), FC(300), BEV(150-300)	Coach Greyhound	90 292	8.6	
HD pickup	Diesel, <b>Gas</b> , CNG, Hybrid, FC, BEV, PHEV	Ford F250	70 327	18	13.5
MD vocational	Diesel, PHEV, BEV(150-250), FC(250)	No simulation (mpg Data from EMFAC)	20 312	8.4	
HD vocational	Diesel, CNG, BEV(150-250), FC(250)	No simulation (mpg Data from EMFAC)	145 312	6.7	

## **Key aspects of the vehicle simulations**

- **UC Davis version of ADVISOR**
- **Road load parameters varied**
- **Drive component characteristics varied**
- **Hybrid-electric control strategy optimized engine efficiency**
- **Lithium titanate oxide (LTO) batteries used for hybrid and fuel cell powertrains**
- **Lithium Cobalt Manganese (LCoMn) batteries used for EVs**
- **Fuel cell efficiency varied with power ratio (60% max.)**

## **Sources for the inputs for the simulations**

- **Supertruck papers and reports**
- **National Academy 21<sup>st</sup> century truck book, second review**
- **DOE/EPA truck standards documents (Phase I and II) especially GEM simulation chapter**
- **Selected reports on vehicle aerodynamic drag of trucks and buses**
- **Battery test data from UC Davis**
- **Previous UC Davis truck simulation studies**

## Energy economy ratios based on the mi/galD equiv. 2030 simulation results

### City driving conditions

#### MD delivery truck

powertrain	mi/galD	Ratio
Diesel	11.0	1.0
Hybrid diesel	17.6	1.6
H2FC	23.3	2.1
EV*	41.7	3.8

\*battery charging efficiency 90%

#### Transit bus

powertrain	mi/galD	Ratio
Diesel	7.6	1.0
Hybrid diesel	12.0	1.6
H2FC	16.4	2.2
EV	24.3	3.2

#### HD pickup truck

powertrain	mi/galD	Ratio
Diesel	13.3	1.0
Hybrid diesel	32.9	2.5
H2FC	37.4	2.8
EV	85.8	6.5

## Highway driving at 65 mph

### Long haul truck

powertrain	mi/galD	Ratio
Diesel	8.2	1.0
H2FC	9.9	1.21

### Intercity bus

powertrain	mi/galD	Ratio
Diesel	10.1	1.0
H2FC	16.9	1.7
EV	26.1	2.6

### HD pickup truck

powertrain	mi/galD	Ratio
Diesel	23.5	1.0
Hybrid diesel	31	1.3
H2FC	38.7	1.7
EV	82.7	3.5

## Summary and conclusions

- Relatively large reductions in energy use can be gained with advanced driveline in urban driving, but the reductions are smaller for highway (65mph) driving.
- Decreasing the road load is key to reducing significantly the energy use for all the technologies and truck types.
- Fuel cells seem to be a reasonable replacement for engines for long haul trucks and inter-city buses
- Battery-electric, HEV and PHEV powertrains seem reasonable for most truck types and buses that are used primarily in urban areas.
- The fuel economy of all the trucks and buses depends significantly on the driving cycle and to a lesser extent on the accessory loads.
